

Here are samples of Student Comments about Cliff's online Chem 10

May 2016

R.I.

Cliff

Thank You for the great learning experience in your class it was an awesome semester.

A.A.

Overall this class was enjoyable and I appreciate the connection the material made with the world we live in and our personal lives.

E.A

I like that this class had a mixture of quizzes, discussions, and exams that focused on both academic material and real-life applications of chemistry in our everyday lives. I too thought it was a fun class

A.D.

The reaction at my local Home Depot store to the seek, find and share was both unexpected and heart warming. As soon as the team member realized this was homework for me he started helping out and presented the "history" of how paint has evolved to its' current and much "greener" iteration and showing off all the various combinations. Who knew Chemistry homework could be so fun.

S.K.

This class had a nice balance of everything which helped many of us retain and apply important aspects of chemistry to our daily lives.

M.M

This class was for the most part interesting. I had never taken a chemistry class before so I believe it was a great introductory course.

M.A.

I was really dreading this class...because it was always so hard for me in high school. However, I did enjoy it this time around.

J.P.

Overall, I greatly enjoyed this class!!

E.B

I really enjoyed taking this class! It was B's and my first ever online class, and it was a lot of fun. I'm glad we got to experience it. I was super trepidatious about doing it, as I don't really like online classes, but am so glad I gave it a shot. Thank you, Dr. Gottlieb, and everyone else, for making this a fun experience!

J.G.

I learned a lot to be honest. I had taken a previous chemistry class in high school but I honestly learned very little, I just learned to memorize study guide to pass test. The teacher wasn't the greatest and us being in highschool only made things worse. So when I started this class I was somewhat nervous, I thought I'd be very behind and always be having to play catch up just to understand concepts. But instead I found that chemistry isn't as difficult as it once seemed, granted it's not a walk in the park but the class is much easier than the name "chemistry" seems. I liked that every week we learned something new & never had to rely solely on ourselves since the class discussions and professor were always active.

I.P.

I learned that I need to be more careful before believing everything I read. I have constantly remembered this assignment when writing papers for other classes and making sure the sources I use are legitimate and accurate.

A.W.

All in all, this experience with chemistry was brought with much dread but it turned out to be just fine!

December 2015

M.N.

I do not often say this, but I have actually enjoyed this text book. It was a very easy read. As such, I enjoyed reading and learning about atoms and atomic structure. The basics at the beginning of this class helped me to build a strong feeling of confidence and optimism about course when I had apprehension and nerves about chemistry. The practicality aspect of this course is what I have also found the most appealing about it.

M.L.

This class was very interesting and I learned a lot about how chemistry isn't just elements and atoms but it is really prevalent in our lives.

M.M.

First of all, I want to express how much I enjoyed this class. I wasn't expecting much beyond refreshing on some basic chemistry concepts, but I feel like I have learned very practical everyday knowledge. Thanks for a great class!

K.G.

This class was overall very good, and I learned a lot about chemistry! Yay!

B.H,

I really enjoy chemistry and found all of our discussions interesting. So thank you Gottlieb 😊

S.G.

I have to say that I will be taking a lot from this course. It was very interesting and informative about things that we do, eat, etc. on a day to day basis. Professor Gottlieb thank you for making this course so easy for us to grasp! I really enjoyed it.

D.S.

This class was a great experience and I was able to absorb so many new interesting informations.

A.M.

This class was pretty awesome!!

R.S.

I really did love this class. I truly believe our professor was fantastic, and the material and class layout was definitely supportive and successful!

M.C.

All in all, I enjoyed the class far more than I thought I would. Thank you, Professor Gottlieb!
August 2015

Hi, I was very worried to take this class however I must tell you that I was very surprised! I needed this course for a pre-req to my Communicative Disorders Master Program and did not think I would take anything (honestly) away from this class- boy was I wrong!

My husband and I have changed the way we live our daily lives-- much more aware of our impact! We actually got an all electric car!!! (Really!!) So, thank you for a very well organized and very informative class- I really enjoyed it!

Thank you again, Lori

August 2015

I just wanted to drop a line to let you know, since I've finished all the requisite work, how much I enjoyed this class since. I will be recommending this course to members of my cohort. It was tough material wise, but I learned a lot and it won't be impacting my GPA!!! Those are all admirable things from the student side. You got us to think and read which led to us learning in a non-stressful, easy to navigate format. Great class!

Thank you!

Robin

August 2015

Hi Cliff! Thank you for a great on-line class experience with you. I was extremely anxious and nervous to be taking a chemistry class (and an on-line one, too!), but you were there every step of the way! Greatly appreciate it and wish you the best! If you ever decide to teach a statistics or biology class on-line, let me know! :D

Sincerely,

Tiffany

August 2015

I'm Brent's wife and he doesn't know I'm writing you, but as a teacher myself for 12 years I know it's nice to know when you're making a difference. Brent and I have been married 20 years. During that time there are only three teacher's that have earned his respect. Several weeks into your class he told me that if you had been his teacher when he was younger, he would have been a chemistry major. He sees the relevance of your subject matter and really enjoys your class. I just wanted to say thank you -- it's nice to see him enjoying school. That's not an easy task while working full time and being the daddy to two little girls.

Sincerely, Ronda

Posted by AC

I have never encountered such an assignment in an online class or even a class in person. I observed just how important it can be to look further than what is provided initially. It had me on my toes for the rest of the discussions for sure. This class was also much more interactive than other online classes I've taken, and the feature of hiding posts until one posts is great.

Post by SC

This has been a great chemistry class. I have learned a lot from these posts about chemistry affecting our lives

Post by EJ

This class really has showed me also how involved chemistry is in our lives.

Post by AS

I too didn't realize how much of the world can be understood by chemistry. I thought it was mostly confined to the laboratory as well. This class has really opened my eyes in regards to just how much chemistry is a part of everything around us.

Post by AN

Now I'm much more aware of the presence of chemistry in our daily life. It's just amazing.

Post by SR

Wow! Before this class I was totally unaware of how the chemistry and chemicals impacted our life on a daily basis. I had never even thought about a cigarette. I have realized through research on the discussion that chemistry impacts literally near everything. Hope you have enjoyed this class.

Post by AA

The notes from the instructor were fantastic in this class and the feedback was great. Overall I enjoyed this class a lot!

Post by SC

This has been a great class I have actually learned a lot in chemistry. As the course went on, I began to understand all of the topics. I believe the research played an important part in this class because whenever we got confused with something, we had to do research to get a better understanding.

Post by KB

Fun class!

Post by AC

Overall, I enjoyed this online class. It was different than the others I've taken.

Post by LE

I thought that this class was going to be one of my more difficult. And I'm glad I took this class.

Post by GG

my favorite thing about this class was learning about how chemicals impact my everyday life. it's hardly noticeable unless someone points it out. the biggest thing i can take away from this class is to be a better critical thinker. the reasoning center of the brain is valuable (:

Post by RG

First of all, I'm middle-aged and have not studied chemistry since high school, which I didn't do well in. So, I was a bit uneasy when enrolling in this course, but decided to face my fears and took the challenge. I'm really glad I did, because Mr. Gottlieb's instruction was so student-friendly making it possible for me to comprehend the chemistry material. Don't get me wrong, there were times that I couldn't grasp some of the chemical equations and felt frustrated. But, then I would turn to all of Cliff's notes and other class resources to find my way that helped a lot.

-----I did not find anything boring in this course; it was entertaining and taught by a very supportive instructor!

Post by RGo

I found this class very enjoyable. It was instructed in a very student-friendly and fun manner. Mr. Gottlieb's teaching style makes the learning environment more interesting and comprehensible for sure. It is awesome that he tells his students not to stress and doesn't overwhelm us. He truly cares about his student's success and it shows.

Post by EJ

. This class has definitely emphasized doing research before you come to conclusions. smile I'm so glad we had an instructor that was interested in helping us see the applications of chemistry to our daily life.

Post by NJ

I really enjoyed this class and also felt like our instructors notes made the class extremely enjoyable and understandable. Having a professor being so willing to talk to us and communicate as well as give feedback made the class much easier to grasp.

Post by HM

I thought this class was going to be tough as well but I was pleasantly surprised. Relating the concepts to everyday life really helped me understand the purpose of chemistry in our world.

Post by CP

I think we learned a lot about thinking for ourselves and questioning the information that is presented.

Post by

MCI really enjoyed the class thanks to our instructor!

Post by MS

When i first signed up for this class i figured i would suffer for 4 months and just try to survive. Surprisingly i understand almost everything we have talked about and read. . Overall i have really enjoyed this class and i never thought that i would of learned so much in chemistry 10, thank you Professor Gottlieb. Thank you for making my last semester enjoyable and educational.

Post byMSe

I never figured i would be saying this but i really liked Chemistry, well this version of it.

Post by KT

I really enjoy how this chemistry class relates to our daily lives and how we can look in-depth for the chemical properties and things that we use and food we consume. Overall I like that we were given the tools to look into the chemistry components of our daily lives, I am able to look at ingredients or substance from a different stand point and determine for myself if it is healthy or not.

Post by KTo

I liked how the class showed how the concepts can be connected real life things.

Post by AS

I have learned many interesting facts in this class. I'm actually surprised I found anything interesting since Chemistry was definitely not one of my favorite subjects in high school. I guess the difference here is that this class did a great job of relating concepts to the world around us and taught me just how much chemistry

is a part of our daily lives. Overall, I thought this was a great class and has taught me an appreciation for chemistry which I lacked before.

Post by HS

I feel that our instructor's notes and help made this class enjoyable and understandable. When a teacher is willing to take time, communicate, and care it make the class 10x better. So thank you!

Post by PU

I enjoyed the class very much overall.

I enjoyed this class which was a surprise to me! I am not very interested in math or science but the way the discussions applied to my life was very helpful.

Wednesday, December 10, 2014, 11:40 PM

This class has changed the way that I have looked at my impact in the world. It is really surprising to find that only a few simple changes in our lives can help the environment and reduce our carbon footprint.

Wednesday, December 10, 2014, 11:19 AM

Just like you I too was always scared about chemistry, but after this class I have a totally new outlook and wish I would have taken a course sooner in my education. I now know how chemistry is everywhere and how important the decisions we make everyday affect our environment and wellbeing.

Tuesday, December 9, 2014, 10:11 AM

I took this class because I had to, I have found that I have not only used what I have learned in this class but I am enjoying it. I can imagine how important this could be in your field. It sounds naive but I really had no idea how chemistry plays a part in everything in our entire world. I agree that this has been a great class.

Friday, December 5, 2014, 12:58 PM

Chemistry has impacted my personal and professional life. As a 20 year critical care nurse I have really have had a great deal of insight on many factors that we have learned in this class. Taking chemistry over 22 years ago to get into nursing school and then again now has changed my appreciation for it. I went through it the first time to just get by not caring about anything other then my grade. Now I apply the information to my practice and it clicks when using electrolytes, acid base balance, oxidation and reduction. It really makes a difference to appreciate the actual bases for the molecular level of what I do at work. I've always had an understanding of it all but taking this course again really solidified those variables that are so easily forgotten.

Chapter 18 about drugs again brought a different view to medications I administer throughout my 12-hour shift. Learning about poisons and how and why they interact at a molecular level is fascinating. In nursing school it's brushed over with more emphasis on treatment rather then source and contributing factors.

Finally, the carbon footprint that we leave behind on earth and how abusive we are to this planet was an eye opener. The amount of waste and amount of time to decay some of these artificial materials we mass-produce was astonishing. That impacted not only my recycling habits at home but at work too. Medical waste is atrocious and excessive. So much is thrown away and unnecessarily too with no second thought or hesitation!

This has been a great class! Thank you!

Friday, May 16, 2014, 2:27 PM

This class has been both interesting and enjoyable to take.

Friday, May 16, 2014, 10:58 AM

I was shocked at how enjoyable this class was due to my past experiences in science classes.

Friday, May 16, 2014, 8:06 AM

This is a lot different from other chemistry classes. The other chemistry class I took didn't really go over how chemicals really affect us daily. Nothing on nutrition, GMOS, recycling, and very little on chemicals in the products you use at home. That's what kept this class interesting for me, being able to see how a majority of these things could be applied to a typical persons everyday life.

Thursday, May 15, 2014, 1:26 PM

I had a lot of anxiety about taking a Chemistry class online, but now that it is coming to an end, I would say that I really enjoyed it, learned a lot and would recommend this class to anyone who is need of a Chemistry class for school.

Thursday, May 15, 2014, 12:58 PM

Chemistry really is in everything and its not as scary as I had thought.

Wednesday, May 14, 2014, 9:09 PM

I learned a lot in this class, a lot more than I ever expected.

Tuesday, May 13, 2014, 4:00 PM

I have really enjoyed this class and found the majority of the material interesting.

Tuesday, May 13, 2014, 3:02 PM

It seems like you have this discussion a lot of good thought. I completely agree that chemistry creates our lives. I never knew how important chemistry was until taking this class. I always hated chemistry because it was a lot of memorizing the periodic table but once you move on from that it becomes so much more!

Monday, May 12, 2014, 1:09 PM

I really like that chemistry "creates our daily lives." So true! Disregarding all the luxuries we have nowadays, chemistry is essential to our body's everyday. Kind of cool and interesting to think of how chemistry is involved in so many different areas of everyday life!

12/12/2013

Professor Gottlieb,

Thank you for a great on-line class experience. I enjoyed this class so much and appreciate all I have learned.

I always look forward to winter solstice as my birthday is the 20th and I like to think Mother Nature celebrates with me tongueout

I hope you have a wonderful winter break as well, you truly are an inspirational Professor who made the class fun and as easy as chemistry could possibly be cool

Thank you!

"Tell me and I forget. Teach me and I remember. Involve me and I learn." Benjamin Franklin

12/11/2013

First I would like to note that I was nervous to take this class. I thought chemistry was very complicated. While it is complex this class seemed more like a class on "How things work". I love learning the how and why behind life. Three things that I found interesting in this class are that we radiate food and it allows it to last longer without any affects of radiation. That is pretty cool. I also thought it was cool to learn about nuclear power plants. I have always had fear of them that stemmed from lack of knowledge. Knowing how they work and what is safe or not safe about them helps process my fear. Finally I found the information on drugs and how they work to be very interesting. The one thing I found boring was probably the beginning semantics of things, probably because at that time I was still prepared not to enjoy the class. As we know everything has to start with the beginning. I think the book choice is an excellent one. It was full of stories of the origins of aspects of chemistry and made it very easy to see how things are connected. Great class, I feel I have learned quite a bit.

5/20/2012

I'm actually disappointed it's over. I've been looking forward to taking chemistry for a long time, and it turned out to be even better than I expected. I learned a lot and my perception of the world has been changed. The discussions were also a lot of fun and very interesting. And your sense of humor was great. Thanks for the great class!

12/10/2011

Nothing in this class was boring to me. Sometimes the chemical names were a little bit hard for me to understand, because English is my second language. Even though it was a little difficult, I wouldn't say that its boring at all!

12/10/2011

I think the recycling section probably changed my life the most. I really took to heart everything we learned and I've made sure to pass it on to friends and family. (My boyfriend calls me the recycling police because I'm so on top of our guests about what they throw in the trash vs. the recycling bins at our house)

12/10/2011

this class is so cool. It has all of the interesting things to learn without all the number-crunching.

5/25/2011

I really enjoyed your class!!! I found it very interesting, even though people thought I was crazy for taking a Chem class as an elective!

I am a bit dissapointed with my grade... Had I not turned discussion 5 in late I would have and A in the class after the final.... But hey I guess some people would be happy with a B.

What other classes do you teach online?

Thanks for a great semester,

5/24/2011

Thank you Cliff,

I really enjoyed your class and you made it really fun. I loved all the notes and your humor. Teachers like you is what makes learning more interesting. I guess, it all starts out with a passion. You have a great summer and life too. Alright! Thanks again Cliff.

5/20/2011

I stayed away from chemistry because I thought it was just too much for me, but I really did enjoy this class. Yes the mathmatics of chemistry is still way over my head, but the rest of it I really enjoyed. I realize it was a beginners class, but everything has to start somewhere. I think I might take another chemistry class. Never thought I would say that.

12/10/2010

I thought this class was really fun and educational. I'd definitely recommend it to anyone looking to take a chemistry course.

12/10/2010

I also really enjoyed the discussion post about consumer safety. I felt like this class did a great job informing us of pertinent and relevant information to our daily lives. I saw how chemistry affects how we live, what we eat, and what products we use. Really intriguing class!

12/9/10

I have really enjoyed this class and have learned much about chemistry and its impact on society while taking this class. I particularly liked how you can make your own grade by reviewing the study guides before the exam as you read and go through the book answering the questions. This has added to my interest to learn the material. I like this approach. Thanks.

12/9/10

I actually loved this class. I felt most of it was interesting and all of it was well done in the notes and the text....with an exception of those few elusive questions on the study guide :) One of the most interesting things I learned in this class was about our bodies. The role of fats and oils, minerals, and other substances. That is something I never really understood nor taken the time to teach myself. Another interesting thing was the products we are involved in everyday of our lives and the effects they have on us. Lead and mercury exposure along with many other things I had no idea about. Along with this I didn't realize the govt. that I'm so proud of isn't doing the best job at protecting us from dangerous substances or even helping to educate the

public regarding this. The third thing I found interesting was my impact on the environment. I knew our environment was in danger and that we all should do our part in helping rectify such a life threatening situation, but I had never really considered the impact that "little ole me" has on that problem. And that there are very simple ways to lessen my impact. The most boring topic of the class was polymers....I didn't find that interesting at all. Once I understood what they were I honestly could care less how they work specifically. I'm thankful for them and very thankful others find them interesting enough to do the research that provides me with luxuries of life like dish soap. I think from this class I have come to love and be totally curious about chemistry. Thank you Cliff for a class well done.

12/8/10

I think that this was probably the most interesting and enlightening class that I have ever taken. In that I got to learn a lot about chemistry and how it works, which I had thought before this class would be boring and uninteresting.

5/24/2010

Hi Cliff,

Just wanted to let you know I thought you led a great class. Thanks for everything!

5/24/2010 9:40:14 PM

Thank you Cliff,

I really enjoyed your class and you made it really fun. I loved all the notes and your humor. Teachers like you is what makes learning more interesting. I guess, it all starts out with a passion. You have a great summer and life too. Alright! Thanks again Cliff.

5/20/2010 | 6:23 AM

I am totally with you on this. I stayed away from chemistry because I thought it was just too much for me, but I really did enjoy this class. Yes the mathematics of chemistry is still way over my head, but the rest of it I really enjoyed. I realize it was a beginners class, but everything has to start somewhere. I think I might take another chemistry class. Never thought I would say that.

5/25/2010 9:05:35 PM

Hi Cliff!

I really enjoyed your class!!! I found it very interesting, even though people thought I was crazy for taking a Chem class as an elective!

I am a bit disappointed with my grade... Had I not turned in discussion 5 in late I would have had an A in the class after the final.... But hey I guess some people would be happy with a B.

What other classes do you teach online?

Thanks for a great semester,

5/14/2009 3:01:39 PM

I think that is a really great idea. If you had asked me at the beginning, I would have told you chemistry had nothing to do with my everyday life. That I was a social worker and working with people all day long I never had anything to do with chemistry. How shocked I would be now to look back on that answer and realize how much chemistry does affect me everyday. This was a great class I really appreciated the knowledge you gave me.

THANKS

5/14/2009 | 9:55 PM

I learned a lot of neat things in this class, most of what I didn't understand in high school Chemistry made A LOT more sense now. One of the three things I enjoyed learning the most about would be about radiation, since I work in a dental office it made it interesting since it's something we use everyday. The second thing would have to be learning how to find how many valence electrons there are. Unlike my high school chemistry class, this book made it pretty clear and Google was always helpful :). The third thing I enjoyed was learning about nuclear fission and the whole chapter that was in. I really like history and learning how the bombs were made was interesting. The thing I was least fond of learning about had to be chapter 17, all of it. For some reason learning about proteins just doesn't do it for me. Overall I really enjoyed the class and learned a lot that I will take with me!

5/12/2009 | 7:28 PM

I think the most interesting fact that I learned this semester was that heat does not rise. What is really happening is that gasses become less dense when heated and then they rise.

This may not be interesting to most, but I am very interested in the concepts of stoichiometry. I find it particularly fun to calculate how much (in grams) of a substance will react with a certain amount of a given substance given a certain equation. The math behind it all is very simple but the procedures can seem complex.

I guess I already knew this from high school, but I am very intrigued by the first law of thermodynamics: "Energy cannot be created or destroyed, only change forms" The thought of the universe as essentially a closed system is very interesting to me. It reminds me of philosophers (fatalists?) who see everything on earth as inevitably caused by prior actions. Under this ideology, if a scientist can only find all relevant variables and the formulas in which they fit, he can essentially predict anything...

Wow, I think I enjoyed this class more than I remember...

5/14/2009 | 1:24 PM

I really enjoyed learning about atoms, and the periodic table again. It was review for me, but I enjoyed learning it again. I also liked learning to balance out chemical equations, this too was review for me again, but I found it fun. I have never done my carbon footprint before. I did know some of the effects carbon emissions had on our atmosphere, but I did not know all that I have learned this semester. I also liked learning about polymers. This subject was new to me, and I like learning about plastics. There wasn't really a subject I disliked, or bored me. The one that took me a while to get, was learning about nuclear decay. The assignments were fun, and I thought very creative. Overall, I had a lot of fun with this class!

5/13/2009 | 10:14 PM

I must say that although I love math and science I was dreading taking chemistry. I saved it until my last semester so I could focus my attention. I can honestly say that this has been my favorite class, with 90+ units completed, that is saying a lot:)

5/12/2009 2:35 AM

some online classes are not so great. I have taken classes where I thought I was teaching myself and there was no feedback from the instructors. This class was not that way thank goodness. I was an enjoyable class.

Before taking this class I did not like chemistry at all. All the long formulas and diferent symbols scared me. But after taking this class I have more of an appreciation for chemistry now...the long formulas still scare me a little though..lol..

I was scared to take this class because I thought that it would be hard. But luckily, thanks to the way the class was presented - it turned out to be a blast. Now, I'm not so scared of chemistry.

I wasn't expecting to learn the types of things I learned, I was expecting boring sterotypical stuff....but It wans't like that at all and I really enjoyed taking this class.

I have to say that I came into this class expecting it to be horribly boring, probably because science has never really been my thing and I didn't do too well with chemistry when I was younger. However, from the very first discussion I knew that this class was going to be awesome.

I always thought chemistry was boring. However, this class made chemistry more fun than I ever thought chemistry could be.

I really expected to hate this chemistry class, but actually, I really enjoyed it. I think a lot of it had to do with Professor Gottlieb being such an awesome teacher.

Overall This is the best chemistry class I've taken. I admit to not doing all the leg work, but I can say that I understood most of it. And I think that the discussions where very helpful and it is interesting to see what other people think. It also helped because it helps to know that you are not the only one having issues or following a certain thought process.

Out of all the online classes I was registered for at that time, Chemistry, this class, was the one I worried about the most. However, once classes got underway, I soon discovered that this was a much better class than expected. Because of the way Cliff, our instructor, has structured this course, learning the material and applying it to our various assignments (not just the actual "assignments" but also the quizzes, discussions, etc...) was a lot easier and more practical.

I thought I would hate this class, and was really dreading it at first. I didn't see how I was going to handle all the credits I was taking and take chemistry, too. As it turned out, I really liked it. I think that Cliff makes it interesting by relating chemistry to our everyday lives which helps us retain the information better.

I thought chemistry was really going to suck, but thankfully, I really had fun! The discussions were all actually useful and thought-provoking, and Professor Gottlieb is definitely not your average chemistry teacher. I was hooked from the first discussion, and I agree, being able to see that other people were struggling, too, really helped.

When I first signed up for this course, I honestly expected for it to be a brain-draining, extremely technical class that I would struggle with constantly. I was totally wrong. While I did struggle with some of material, I found that a majority of the content we covered was applicable to many aspects of my life.

I wanted to send you a quick email saying how much I really enjoyed your class. It was really exciting to see the practical application to such a complex study. If I wished to learn more chemistry what would be the next class to take?

Overall I really enjoyed this class, and when I told people that I was taking a chemistry class they felt bad for me, but I would like to think that I learned a lot and really enjoy all the fellow students, the teacher and the class. I hope to let anyone else that is looking in to taking a chem class to tell them to try chem 10 online.

I was dreadful of taking chem, and I got alot of negative responcees when I told people I was taking it, but it really wasn't all that bad, in fact I kinda enjoyed it and I learned alot to boot.

I took this class as a general ed requirement too. I am definitely not science minded and I was dreading this... but I am surprised to say that I learned a lot and I ENJOYED it. :)

I took this class ONLY because I needed a science for my transfer units. I had NO interest in chemistry.

I am shocked to realize how much I have learned through this semester. I actually find myself discussing chemistry with friends over dinner !

This has been my favorite class in a long time, if not ever. I find myself doing the same things too. Discussing chemistry with friends, looking at ingredients lists. Weird

I have enjoyed taking this class and hope to take additional classes with Mr. Gottlieb in the future. This class will definitely be recommended to other student by me :)

Thank-you Cliff, its been a great class
